Abstract

Moldy food commodities, storage fruits and vegetables were collected from a refrigerator of various sources. Direct isolation and tissue transplanting methods were used to isolate spoilage fungi on potato dextrose agar. The results indicated that 15 genera, 20 species of spoilage fungi were found on fruits, vegetables and other food commodities, comprising 9 genera of Hyphomycetes (*Alternaria*, *Arthrrium*, *Aspergillus*, *cladosporium*, *Fusarium*, *Nirospora*, *Penicillium*, *Thielaviopsis* and *Trichoderma*), 3 Coelomycetes (*Colletotrichum*, *Phomopsis* and *Phyllosticta*), 2 Ascomycetes (*Eurotium* and *Talaromyces*) and one Zygomycetes (*Rhizopus*).
